

Applied Corporate Finance and Investment Banking

This is the BEM “lab” course. Stress is on bridging the gap between theory and practice, a gap that can be alarmingly high. Throughout the course we will use current financial data and attempt to integrate it with the theories you learned from Professor Jin in BEM 103. This requires a detailed understanding of the limitations of the data in relation to the assumptions of financial theories. The organizing theme of the course is valuation because all financial decision making can be reduced to an appropriate comparison of estimated values.

I have found that to understand an issue a student must be able to explain it. Consequently, the entire grade for this course is based on participation. In addition to lecturing, I will call on specific students to answer a series of questions. It will be a bit like a scientific version of a Harvard law school class. Don't panic if you don't know answer to some of the questions because I suspect that will be common. However, if it becomes a habit, your grade will suffer. To perform well, it is **critical** that you do the reading **prior** to each class session. For those of you who do go into business related fields, there is a side benefit to the participatory approach. Because corporate events are fast moving, business ideas are usually evaluated in Q&A sessions similar to those in this course.

Prerequisites: BEM 103 no exceptions as this course will build off Prof. Roll's

Time: Thursday 6-8:50 pm in Baxter 25.

Office hours: By appointment in Baxter 136, bcornell@hss.caltech.edu
