

- 20 students maximum
- CS 4 (in OCaml) is a hard prerequisite (i.e. CS 4 starting in Winter 2016)
- CS majors get top priority

== Note to students considering taking this course:

This is the first time we are offering this course. Students must have passed CS 4 (in OCaml) before taking this course, since most of the course will involve writing and modifying significantly-sized programs in OCaml. You should expect the course materials to be in rough shape, and be prepared to assist us as we refine them. We will strive to be fair, but some of the assignments and course materials may be unreasonably hard. If you are not very confident of your ability to thrive in a possibly challenging environment, you should wait and take the course in a subsequent year. That said, the course materials are extremely interesting and if you take this course we guarantee that you will learn something worthwhile.
