

EE/CNS/CS 148b

Schedule: TuTh 10:30-12:00

Collaboration policy:

Collaboration is encouraged when it helps understanding and learning. Discussions help, copying does not. Therefore: you may discuss the problem sets with other people as much as you wish, but homework turn in should be yours. So: toss out any notes you wrote during your discussion before you start writing your solutions. You should write your homework by yourself and understand it completely. Do not look at other people's written homework, do not show yours. Do not read class notes or homework solutions from previous years at any time. Other books and notes can be used, but not copied from. Do not copy / cut and paste code from other students. For the purpose of debugging it is OK if you show your code to another student, so that they can help you troubleshoot.
