

Ge 194. Special Topics in the Planetary Sciences. Planetary Discussion Group.

Units 1-1-1. first term.

This course will provide an interactive environment for students to discuss topics in the literature about observations and theory related to planets, both within the Solar System and around other stars in the Galaxy. Topics covered include planet formation, detection/characterization of exoplanets, observations of Solar System bodies, dynamical modeling, planetary interiors and atmospheric dynamics. Instructors: Johnson, Brown.
