

**Psy 90. Applied Neuropsychology of learning.** *9 units (3-0-6).* An introduction to the neuropsychological mechanisms associated with learning and creativity, and to how different factors and behaviors impede and enhance them. No previous coursework in psychology or neuroscience is required. The course includes labs in which the students will test various hypothesis about their own learning processes. Graded or P/F. *Note that this course can be used to fulfill the overall HSS core requirements, but does not count towards the introductory or advanced social science requirement.* Instructor: Rangel. Fall 2017.
